Dear Students,

Due to the current situation, I will provide you information so you can continue with this lecture. As already mentioned, this lecture has 5 parts: Part I was the classroom lecture on February 23 and March 1, Part II was planned for today (implementation of accessible websites), Part III is independent student work, and Part IV is the presentation of the results.

Below are instructions related to Part III:

- I will upload you the content of today's lecture as a PDF, as well as a ZIP file with the sample website implementation, which is necessary to carry out your independent work.
- The abovementioned items are only intended for your own use and should not be copied or distributed to third parties.
- The "Installation Instructions" (for Windows and Mac) describe how to setup your software environment for your independent work. The "exercises" document contains concrete tasks which you should carry out (implementation). The "students_without_solutions" ZIP file contains the software you need for your independent work. Use the _MacOS or _Windows version, depending on which system you have.
- If you have any questions, you can write me an e-mail to: dvya@zhaw.ch, I will do my best to assist you.
- Students should create groups of four to carry out the tasks. Please send me an e-mail by Friday, March 8th, and tell me who is in your group.
- Each group should create a written report describing your implementation, and send it to me by May 17th.
- The students should send me a URL so I can remotely test their implementation, or send me the ZIP file with their implementation so I can install it locally and test it.
- I will test each solution using the JAWS screen reader. In addition, I will also check the source code.

Students who do not know other classmates should use the forum on OLAT to find a partner. (Note: I will not monitor the content in the forum. The primary way to contact me is still by email.)

Best,

A. Darvishy
